Hiring Manager  
Deutsche Bank AG  
1 Columbus Circle  
New York, NY 10019-8735

Dear Hiring Manager,

I am writing to express interest in the Technology, Data and Innovation Internship at the Deutsche Bank. I am a junior pursuing a BSc in Computer Science and a minor in Mathematics at Emory University, looking for an internship where I can contribute to important projects and improve my skills.

Currently, I am working as a Technical Research Intern as a part of the National Science Foundation's REU program at Emory. During this experience, I have collaborated and communicated with academically and socially diverse students to work with the latest technologies in the field. Continuous exposure to new ideas and technologies—that I have to understand, utilize, and adapt to research goals—has made me adaptable and a fast-learner. In addition, my experience developing an AI-based language bias pruner for the Michael C. Carlos Museum from scratch over the summer gave me experience with applications of technology and all phases of the Software Development Life Cycle.

Additionally, last semester, I worked at USA Boccia as an iOS App Development Intern where I employed my time management and active learning skills to learn Swift while developing a match-keeping app for a para sport called Boccia. I helped develop a modern interface to speed up volunteer onboarding and increase accessibility for participants at nationwide Boccia games and tournaments.

Through these applied experiences I have had one key takeaway: critical thinking capabilities are more important than skills, especially in technical settings where innovation roots from novel approaches. This ideology allowed me to innovate, solve, and create. The same idea has been echoed through the job description and the Deutsche Bank's career website. In addition, the intersection of finance and technology at the Bank parallels my interdisciplinary experiences. I look forward to learning more about the finance world while contributing my coding skills to creatively engineer software and develop Machine Learning based solutions to business-critical projects. Solutions developed by the Deutsche Bank like RatingBot and PayTrack excite me, promising a culture of innovation; these projects' continued improvement and growth also shows a culture of continued improvement and growth which are likable qualities for me.

Thank you for your time and consideration. I look forward to speaking with you in detail soon.

Sincerely,

Raasikh Kanjiani
